

- ▶ High capacity (24x2ml)
- ▶ Cooling function to protect temperature sensitive samples
- ▶ True refrigeration - no external connections, dry ice or liquid nitrogen
- ▶ Full range of bead materials and sizes to meet sample needs

The BeadBlaster™ 24R is a highly efficient bead homogenizer with built in refrigeration to protect temperature sensitive molecules from heat degradation and denaturation.

Unlike most bead homogenizers, the BeadBlaster 24R has true, compressor-based refrigeration – no dry ice, no liquid nitrogen and no air supply needed. Simply set the desired temperature and precool the chamber. Set temperature will be maintained in the chamber throughout the homogenization process.

The BeadBlaster 24R retains many of the features of our popular BeadBlaster 24. The stainless steel tube carrier subjects up to 24 samples to an optimized, high speed, 3D motion, producing high energy impacts between the samples and micro-beads to release cellular contents. Operating parameters are set and displayed digitally, while 50 profiles can be stored in memory and recalled for future use. A brushless motor reduces motor noise and provides maintenance free operation.

Benchmark offers an assortment of prefilled tube kits for processing a variety of sample types. The popular Triple-Pure™ kits include acid washed, heat treated, zirconium beads. The beads are tested to be free of nucleases, making them ideal for molecular biology applications.
