

IKA®

Overhead Stirrers

designed
to work perfectly

Mechanical, Electronic, Software, Control and Design Engineering... Combining the best of all worlds

Designed to optimize complex stirring applications, IKA® offers the very best in overhead stirrer technology. Our overhead stirrers provide the perfect solution to all of your laboratory stirring and mixing needs, from lower to higher viscosities. IKA® overhead stirrers process stirring quantities up to 200 liters.

Our overhead stirrers stand out because of their indispensable features, which include: electronic safety circuit, push through agitator shaft, digital display, two speed ranges, and the ability to control the rheological changes and monitor all parameters using labworldsoft® software. Additionally, there are several other special features available, such as microprocessor controlled speed technology, removable wireless controller and a digital error display. A broad spectrum of stirring tools is the key to successful mixing! IKA® equipment meets CE standards and fulfils international safety regulations.

3 Year warranty*

* 2+1 years after registering at www.ika.com/register

Protection class according to DIN EN 60529: IP 40

Twin technology | Digital & Control

Digital display for precise monitoring of set and actual speeds

Torque trend display to get real-time information on viscosity changes

Rotating knob for adjusting the speed and **pressing knob** for navigating through the menu on the wireless controller

TFT Display for better image quality and easy navigation

External probe for connection to a temperature sensor for accurate temperature control

USB interface to control and document rheological changes and other parameters using labworldsoft® software and for updating your firmware

Brushless EC motor for longer life span, low maintenance and higher efficiency

Wireless Controller (WiCo) Removable wireless controller for easy and user-friendly operation

2+1

Year warranty*

IKA+

R 60 keyless chuck is available for EUROSTAR 20 / 40 / 60 / 100 series

The EUROSTAR digital and control series are conceptually similar; both series feature a speed display and an overload protection. Furthermore, the control version is designed with a removable wireless controller and is equipped with a torque trend display, TFT display, RS 232 and USB interface. In addition, you will be able to update your firmware online by connecting your control device via USB to a computer.

Special features | Accessories

Ident. No. 0001412100

1 R 2723 Telescopic stand

Particularly stable stand with an H-shaped base that prevents the stand from tipping backwards. Additionally, this stand is equipped with a spring stand rod, which enables heavy instruments / attachments to be raised and lowered smoothly without difficulty.

Ident. No. 0002657800

2 R 270 Boss head clamp

Specialized clamp with openings for stands R 2722 and R 2723

Ident. No. 0003008600

RH 3 Strap clamp

For securing vessels incl. boss head clamp R 270

Ident. No. 0002603000

3 R 301 Stirring shaft protection

Prevents potential injuries around rotating shafts and stirring elements

IKA+

To get customized and additional accessories, please visit www.ika.com/service

EUROSTAR control | Advanced precision

IKA® further advances its' mixing technology by offering the first overhead stirrers with wireless technology. Stress-free mixing at your convenience with increased productivity, flexibility and enhanced safety features. Additionally, comes equipped with the new online update function (only control version), your device is always up-to-date.

The display shows torque, temperature, timer, speed and PC connectivity. Additionally, several other parameters can be set such as language, background, brightness, sound, etc.

The EUROSTAR control series can be operated via Bluetooth as well

EUROSTAR control | Wireless technology

The wireless controller can be separated from the overhead stirrer. This allows for working in a fume hood or safety cabinet without lifting the protective screen, which in turn helps protect the user from toxic material exposure in addition to preserving sample integrity.

EUROSTAR 100 | Digital & Control

EUROSTAR | 20 high speed digital & 200 control P4

IKA+

The only stirrer with clockwise and counter clockwise rotation for intensive applications and better mixing results

Laboratory stirrer designed for highly viscous applications and intensive mixing

2+1 years after registering at www.ika.com/register

Clockwise and counter clockwise rotation

Digital display for precise monitoring of set and actual speeds

Wireless Controller (WiCo)
Removable wireless controller for easy and user-friendly operation

TFT Display for better image quality and easy navigation

Extremely powerful laboratory stirrer designed with high torque

USB interface to control and document rheological changes and other parameters using labworldsoft® software and for updating your firmware

RS 232 interface for PC connection

The electronic overhead stirrers have a constant torque over the entire speed range. They can also be used for short-term overload operations. The electronic stirrers are ideal for reproducible procedures as well.

The mechanical overhead stirrers have a high torque at low speed and the torque decreases when the speed increases. The speed range I is for highly viscous samples and the speed range II is for intensive mixing of low viscous samples.

Stirring elements | Accessories

Propeller stirrer, 4-bladed
Standard stirring element for drawing the material to be mixed from the top to the bottom. It creates local shearing forces and axial flow in the vessel. This propeller stirrer is used at medium to high speeds.

Propeller stirrer, 3-bladed
Flow-efficient design for drawing the material to be mixed from the top and the bottom while creating minimum shearing forces. This propeller stirrer is used at medium to high speeds.

Propeller stirrer, 3-bladed
Flow-efficient design for drawing the material to be mixed from the top and the bottom while creating minimum shearing forces. This propeller stirrer is used at medium to high speeds.

Dissolver stirrer
This stirrer provides radial flow for drawing the material to be mixed from the top and the bottom while creating high turbulence and high shearing forces for particle reduction. Medium to high speeds required.

Turbine stirrer
This stirrer is used for drawing the material to be mixed from above while generating axial flow within the vessel. It carries a minimum level of danger of injury when contact is made with vessel. It also creates minimum shearing forces and is used at medium to high speeds.

Centrifugal stirrer
Two-bladed stirrer whose blades open with increasing speed. Perfect for stirring in round vessels with narrow necks and the effect is similar to that of a 4-bladed propeller stirrer. Medium to high speeds required.

Paddle stirrer
This stirrer creates tangential flow, minimum turbulence, good heat exchange and gentle treatment of the product. Low to medium speeds required.

Anchor stirrer
This stirrer creates tangential flow, high shearing rate at the edges, minimum deposits on the vessel wall making them great for polymer reactions and even distribution of high mineral contents in liquids. Ideal for medium to highly viscous fluids. Low speeds required.

More stand options for optimal stability!

Torque

Torque is mathematically defined as the vector product of force and lever arm. It is therefore calculated as $M = F \cdot r$, where M is the torque, r is the lever arm and F is the force. The magnitude of the force is based on the perpendicular distance from the axis of rotation to the line of action of the force.

The unit of measurement of torque is Nm. For example, in mixing systems, the drive power of an electric motor is delivered to the rotating drive shaft or the drill chuck fixed to the mixing tool. What matters is the transfer of power in the drive to the rotating mixing tool. Torque is the key to the relationship between the mixing tool geometry, viscosity of the medium to be mixed and the speed of rotation. The power is transferred from the motor to the shaft and then to the mixing tool. The torque acts on the mixing tool at the drill chuck as shown in the brochure.

Typical Dynamic viscosity values (Range 1 – 100,000 mPa*s)

Substance	Viscosity η in mPa*s
Water	1
Milk	2
Coffee whipped cream	10
Olive oil	100
Lubricant oil	200
Motor oil	650 – 900
Shampoo	3000
Hand cream	8000
Honey	10,000
Ketchup	50,000
Toothpaste (40°C)	70,000
Asphalt	100,000

Unless otherwise stated, the values refer to the viscosity at 20°C and atmospheric pressure

$$1\text{N} = [\eta] \cdot (\text{m}^2 \text{m} / \text{m s}) \Rightarrow [\eta] = \text{Ns} / \text{m}^2 = \text{Pa}\cdot\text{s}$$

Fluids are either Newtonian or Non-Newtonian. Fluids whose viscosity is constant at all shear rates are called Newtonian fluids (e.g., pure fluids, ideal fluids / water, oil and most gases which have a constant viscosity). Fluids whose viscosity is not constant at all shear rates are called Non-Newtonian fluids (e.g., blood, sand-water mixtures, dough, puddings, asphalt cement, etc.).

Oil is a good example of a highly viscous liquid. It does not flow easily and affects parameters such as the thickness of the lubricating film in bearings, motors, gear units, leakage losses in the hydraulics, pump efficiency and friction losses in pipes.

Applications and Industries

- Food:** Butter, mayonnaise, ketchup...
- Cosmetics:** Creams, shampoo, soap...
- Pharmaceutical industry:** Pills, tablets, suppositories...
- Chemical industry:** Aluminum oxide, calcium hydroxide, glycerin...
- Abrasives:** Silicon carbide, crystals, sand...
- Inks and Coatings:** Printing ink, coating paint...
- Glues and Adhesives:** Adhesive mixture, Vaseline, two-component glue...
- Plastics and Polymers:** PVC powder, pre-polymer, polyester resin...
- Paints and Pigments:** Metallic paints, color pigment suspension, dyes for adhesive plasters...
- Cement and Construction:** Concrete, mineral clay, loam...

DIN EN IEC 61010-1
DIN EN IEC 61010-2-051

All IKA® overhead stirrers adhere to the requirements set forth by the norms DIN EN IEC 61010-1 and DIN EN IEC 61010-2-051.

They meet and exceed CE standards and fulfil International safety regulations.

labworldsoft®

IKA® laboratory software labworldsoft® is an advanced software for all your laboratory needs. With the help of this software, you can network up to 64 laboratory devices via one PC. All test parameters can be documented ensuring complete automation of your laboratory experiments. Measurements and processes may be run independently. Long waits and processing times are reduced, which increases productivity.

Comprehensive Worldwide Service!

Our dedicated team of engineers provides comprehensive worldwide technical service. Please feel free to contact your dealers or IKA® directly in case of any service queries. Hotline: In the event of an equipment malfunction or technical questions regarding devices and spare parts: call 00 8000 4524357 (00 8000 IKAHELP)

IKA® Application Support

Our Application Center spans 400 sqm and offers modern facilities for presenting and testing lab devices and processes. This brings us even closer to our customers and improves our service. Here, prospective buyers and customers can test out processes that involve stirring, shaking, dispersing, grinding, heating, analyzing and distilling. In addition, it also further extends the opportunity to test your own devices and to develop new models.

Does IKA® supply an explosion-proof stirrer system?

IKA® does supply custom-made explosion-proof systems for larger volumes upon request.

What does torque trend display mean in the case of the EUROSTAR control range – can they measure viscosity?

The EUROSTAR control units only display the change in torque. Normally, this is associated with a change in the viscosity of the medium. The viscosity cannot, however, be directly calculated from the data. In order to do so, one can use a viscometer.

How long can a stirrer be operated without interruption?

All IKA® stirrers have a 100% duty cycle, i.e. they can be operated without interruption.

Are there any stirrers which rotate in different directions?

All IKA® stirrers rotate in clockwise direction except for EUROSTAR 100 control which rotates in both clockwise and counter clockwise direction. Additionally, upon request for special applications, counter clockwise direction can be incorporated.

What is the difference between the electronic and mechanical versions of the stirrers?

In mechanical stirrers, the speed is set by means of a continuously variable transmission. A higher torque can be made available directly in the lower speed range by altering the transmission ratio of the actuator. Whereas in electronic stirrers, the power output is monitored and controlled by a processor. This ensures a constant speed range even with changes in viscosity.

What quantities and viscosities can be processed with IKA® stirrers?

Depending on the unit, maximum stirring quantity ranges from 20 ml to 200 liters. Similarly, the viscosity ranges from 1 mPas to 150,000 mPas.

What should be the diameter of the vessel in relation to the stirrer tool?

In the case of water, the diameter of the vessel should be twice the diameter of the stirrer element and the height two or three times that of the stirrer element. In the case of high viscosity material, the stirrer element should be closer to the vessel wall.

What ambient conditions are required for the operation of IKA® stirrers?

The ambient temperature should be consistent between 5 °C and 40 °C and the humidity should not exceed 80%.

Application Support!
