

# Insect Cell Feed Medium 2 (90-093)

CORNING

## Instructions for Use

### Media Basics

Dry powder Insect Cell Feed Medium 2 was developed for insect cells, without animal-derived components, contains L-glutamine and Poloxamer 188, without sodium bicarbonate. It is used as a feed media for the production of recombinant proteins in insect cells.

### Specifications

1L of liquid media is produced using 41.2 g of dry powder medium.

Description	Cat. No.	Quantity	Expiration Date
Insect Cell Feed Medium 2	90-093-PBT	1 x 10L	2 years
	90-093-PCT	1 x 50L	2 years
	90-093-PDT	1 x 100L	2 years

### Storage Conditions

2°C to 8°C, sealed and protected from light.

### Preparation Method (1L)

1. Check the condition of the powder before preparation to ensure it flows freely and is free of clumps. Clumping indicates the medium has absorbed moisture, which may impact product quality and stability.
2. Add room temperature (20°C to 30°C) cell culture grade water (Corning 25-055-CM) or ultrapure water to a clean container to 90% of the final volume (~900 mL). Place water on a stir plate and rotate at slow setting.
3. Carefully weigh out 41.2 g of dry powder medium onto a clean weighing dish. Slowly add the medium powder to the container, rinse the weighing dish with water and add to container. Stir the solution for 30 minutes until the liquid becomes clear. **NOTE:** Do not add medium powder first and then water, as it will clump and prevent full dissolution.
4. Add 0.35 g of sodium bicarbonate (Corning 61-065-RO).
5. Stir continuously for 10 minutes until completely dissolved and add water to within 1% of the final volume.
6. Adjust the pH value to  $6.10 \pm 0.05$  by slowly adding either 1N NaOH solution or 1N HCl and stir until the desired pH is stable.
7. Stop stirring, add water to 1L and filter sterilize using a 0.22  $\mu\text{m}$  or smaller filter (Corning 431098).
8. The prepared media should be stored at 2-8°C protected from light.

**NOTE:** There are 2 methods to prepare 5L, 10L, 50L, and 100L quantities:

1. 41.2 g of dry powder can be weighed per liter and prepared according to the method above.
2. A single package (5L, 10L, 50L, and 100L) can be completely prepared at one time according to the method above.  
**NOTE:** It is important to add the 0.35 g/L of sodium bicarbonate in proportion to the volume of media prepared.

**Warranty/Disclaimer:** Unless otherwise specified, all products are for research use or general laboratory use only.\* Not intended for use in diagnostic or therapeutic procedures. Not for use in humans. These products are not intended to mitigate the presence of microorganisms on surfaces or in the environment, where such organisms can be deleterious to humans or the environment. Corning Life Sciences makes no claims regarding the performance of these products for clinical or diagnostic applications. \*For a listing of US medical devices, regulatory classifications or specific information on claims, visit [www.corning.com/resources](http://www.corning.com/resources).
