

# Proven & Effective Wipes in a Range of Formats

## **Klerwipe** 70 30 Alcohol Impregnated Wipes

Sterile, non-woven, 100% knitted polyester and low-particulate wipes impregnated with spore free alcohol

The use of wiping can improve the effectiveness of the cleaning and disinfection procedure. Klerwipes are highly absorbent and remain wet throughout use ensuring a consistent application of alcohol to the whole surface area.

Using an impregnated wipe eliminates over-spraying of alcohol, reducing the risk of inhalation, especially in tight working spaces.

The alcohol evaporates completely and the wipes do not contain any chemical binders, so no undesirable

residues remain. This makes the Klerwipe 70|30 alcohol wipes particularly suitable in product contact areas where residues are unacceptable.

Klerwipe 70|30 Alcohol Impregnated Wipes:

- Available in 100% polyester or polyester/cellulose blend
- ▲ Are available in either pouches or tubs
- Allow a rapid disinfection of surfaces, equipment and production components
- ▲ Are suitable for direct product contact

# Klerwipe 70 30 Alcohol Impregnated Wipes

Sterile, non-woven, 100% knitted polyester and lowparticulate wipes impregnated with spore free alcohol

## Why use Klerwipe Alcohol Impregnated Wipes?

#### **EFFECTIVE**

All wipes are impregnated with 0.2 micron filtered alcohol, packed and double bagged in a Grade C (ISO Class 7) cleanroom, irradiated using a validated process at no less than 25kGy.

The wipes are impregnated with a choice of Klercide 70|30 IPA, a blend of 70% v/v Isopropyl Alcohol with either deionised water or EP grade Water for Injection (WFI), or Klercide 70|30 Denatured Ethanol, 70% v/v Denatured Ethanol blended with deionised water.

#### **POUCH**

Each pouch contains either 10 or 15 wipes to reduce wastage during a manufacturing session. The double bagging features Klertear which makes it easy to open even when wearing gloves.

The pouch is easily resealable to prevent the wipes drying out and does not itself generate any particles. Wipes are available as 100% polyester or low particulate, impregnated with either 70% v/v IPA or Denatured Ethanol.

Klerwipe 70|30 IPA low particulate pouches are also available in vaporised hydrogen peroxide impermeable packaging for use in gassing isolators.

#### **TUB**

Two types of tub wipe are available: a medium weight polyester/cellulose blend wipe or a light weight non-woven wipe available in resealable tubs with a low shedding aperture.

Each tub is supplied double bagged and gamma irradiated. The tubs contain 100 or 200 wipes.

#### **VALIDATION**

Manufactured by a ISO 9001:2008 and ISO 14001:2015 accredited company.

Certificates of Analysis and Irradiation are available with every batch.

The wipes have a two year shelf life.
